Firmware Upgrade Guide

FW 1.0.5 to FW 1.0.6
15th June 2017

Upgrading Firmware - Step by Step

1) Using a web browser (Google Chrome recommended) browse to the SpotBox (ANT-37000)

Default address http://192.168.0.222
If you have a V1.0.5 Firmware or Beta 1.0.6 (beta=dates prior to 15th June 2017) you will need to use port 8080
**e.g** http://192.168.0.222:8080
After this upgrade port 8080 is replaced by port 80, hence no need to add this to the URL (http://192.168.0.222**)**

2) Log in using username and password

Default Username/Password: **admin/admin**

3) Browse to the **SYSTEM** page and select **SYSTEM UPDATE - choose file**.

You may select the Spotboxfirmware which will look something like this
**spotbox-update_nano2_release.swu**
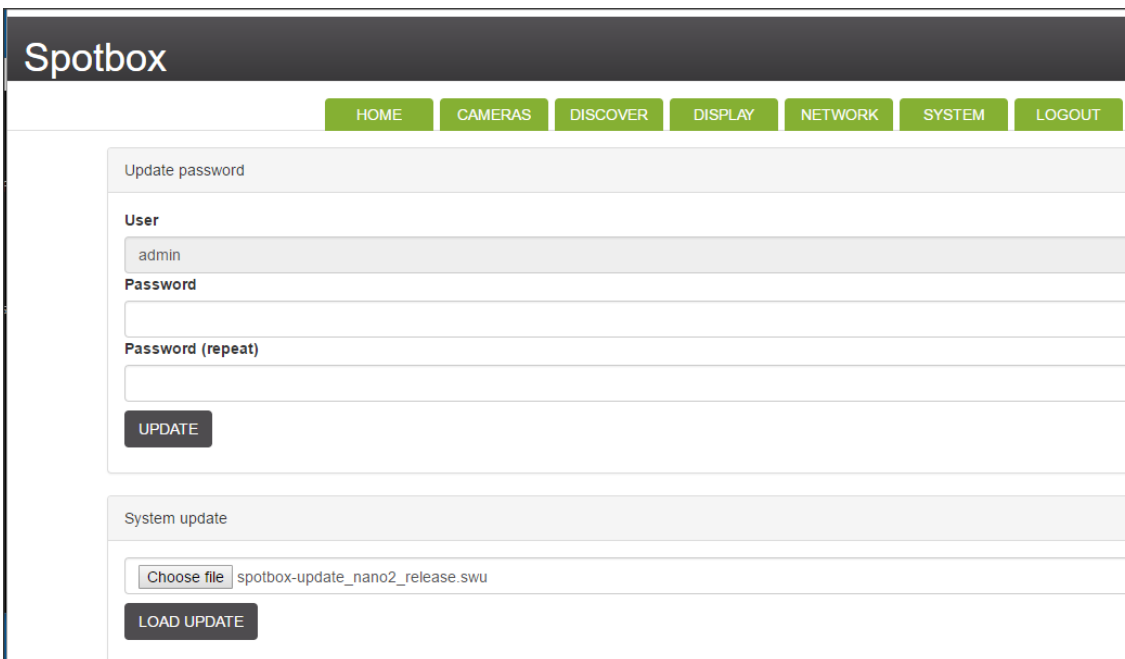

4) Click Load Update and you will see a Green Progress Bar

www.antrica.com

Upgrading Firmware - Step by Step

5) After the Green Progress bar has finished you should see this message -Click OK

6) After a few moments on your LCD screen this message should appear. Reboot the box and you should see the Quad view screen showing 4 cameras with red writing and the version of firmware 1.0.6 .The upgrade is successful

Upgrading Firmware - If things go Wrong

If you do not see some or all the screens in the previous section please do the following:

A) Wait 2 minutes and Reboot the box, if this does not resolve the issue or you have nothing on screen do a system reset as follows:
B) Unplug power from Spotbox, press the red rectangular button on remote and HOLD it. Keep Holding it and power up the box…keep holding the button. Eventually you will see a Logo with Full System Reset - release the button and Reboot the box.
C) If the firmware did not upgrade try resetting the browser, empty the cache and browser history and try again.
D) If you did not see any Green progress during firmware upgrade try resetting the browser or use Google Chrome which is a proven browser with spot box.

If all else fails call:
