ANT-3xx00xx product code release from 2020 onwards..... 1
 Document info..... 1

The affected products are:

1. ANT-35000 series encoders, these are the A1 & H1 derivative
2. ANT-38500 encoder / decoder
3. ANT-36000 series decoders, this includes the M derivative

For example

Previous release **4.9**12b03
 Latest release **4.0**01b01

Red digit is for the year and **blue digits** are for the month.

As only the last digit of the year is used, the 9 means 2019 is represented by a 9 and 2020 is represented by a 0.

This gives the illusion of the latest code, that which is released in 2020 or 2021, having a lower code version number and so appearing older, than the code released in 2018 and 2019

If you require any further clarification of this issue please:
