

ANT-35000A1 ANT-35000H1 EOL & Replacement Part Numbers

The ANT-35000A1 and ANT-35000H1 are now end of life and have limited / no stock available for purchase. This letter serves to inform you there are new replacement parts available and what (if any) are the differences.

ANT-35000A1 (EOL) > ANT-35100A (New Part #)

ANT-35000H1 (EOL) > ANT-35100H (New Part #)

The next generation/replacement encoders have been designed to carry the functionality of the previous products over, with the additional benefit of H.265 or H.264 as an option.

The key differences are highlighted below:

1. Removal of CVBS input on ANT-35100A (HD-SDI & HDMI remain)
2. H.265 added (H.264 still available)
3. The same ONVIF / VMS Integrations
4. Physical form factor remains - location of the connections has changed
5. Firmware to have the same functionality / user interface

Therefore please purchase with confidence as these are designed to replace the older units and support all the previous functions and integrations.

Many thanks,

Carly Loke
