

ANT-1772 mechanical drawing

The required screw for the 2.49mm holes is a 2.5mm.

Some general information about metric screw sizes:

The actual diameter of an M3 screw is usually about 2.9mm, an M2.5 screw is 2.4mm and an M2 is 1.9mm. So if you are measuring the screw yourself and your calliper says the screw diameter is 2.4mm you have to order an M2.5 screw to match it.
